LINKING EMPLOYERS AND JOB SEEKERS THROUGH INNOVATIVE STRATEGIES AND RESOURCES FOR ENHANCED EMPLOYMENT OUTCOMES

ABSTRACT

The employment portal service is an innovative web application designed to transform the hiring process by providing an engaging platform that connects companies with job seekers. This portal adeptly consolidates essential information from both employers and candidates through a systematic approach to data collection, categorizing it according to specific job requirements and available opportunities. Registered employers can post detailed job listings, track the progress of applications, and actively seek candidates based on vital attributes and competencies. This streamlined process enables employers to swiftly identify the most suitable applicants, significantly reducing the time and effort involved in recruitment.

With its intuitive interface, the portal allows job seekers to effortlessly navigate job listings tailored to their qualifications and career aspirations. Users have the ability to update their profiles in real-time, ensuring prospective employers have access to the most current information. The platform provides candidates with invaluable resources, including resume guidance, career coaching, and interview preparation materials, empowering them to effectively distinguish themselves in a competitive job market. Ultimately, this employment portal service enhances the entire hiring experience by fostering meaningful connections between talent and opportunity.

. **Frontend**: Angular, TypeScript, Bootstrap

. **Backend**: Node.js, Express.js
